Education

SGSITS — Indore MP
Bachelor of Technology — 2020 – 2024

Experience

SDE 1 — December 2024 – August 2025
Pixel Technology — Indore MP

- Architected scalable real-time messaging infrastructure for 100+ businesses supporting 10K+ concurrent WebSocket connections with <100ms delivery latency, plus a shared team inbox with live agent assignment, conversation tagging, and canned responses, zero message duplication across 5+ concurrent agents
- Engineered a full Meta Business API template engine covering all types - text, media, carousel, WhatsApp Flows (multi-screen in-chat forms), interactive lists, auth OTP, and LTO, reducing creation time from 30 min to 3 min and lifting CTR by 47%; additionally built a drag-and-drop Flows builder that generates compliant JSON screen definitions for booking, lead capture, and order tracking, cutting business onboarding time by 60%
- Slashed bundle size by 65% and improved LCP from 4.2s to 2.5s (Core Web Vitals +40%, Lighthouse 89) through RTK Query cache normalization, React.lazy code-splitting, and dynamic imports, also shipped a 45+ component library (Chakra UI + Shadcn) adopted across 8 projects, boosting reusability from 23% to 78% and cutting dev time by 60%
- Built a Binance P2P-style marketplace from scratch, ad creation, real-time order matching, and smart-contract-backed escrow (lock on order → release on payment confirmation → auto-escalate disputes), achieving 94% transaction success rate across USDT/ETH/TRX pairs with optimistic UI updates via TanStack Query
- Integrated MetaMask and TronLink wallets (ethers.js + TronWeb) with full deposit/withdrawal flows and on-chain confirmation tracking; engineered Web3 wallet sign-to-verify + JWT auth with 2FA and KYC gates, plus a trader dashboard (TanStack Table) surfacing order history, merchant ratings, completion rates, and live multi-wallet balances

SDE 1 — August 2025 – Present
MTS — Indore MP

- Engineered the Admin Panel (Next.js 15 + React 19) for a headless commerce platform serving enterprise D365 Commerce clients, building storefront configuration UI, site builder (drag-and-drop page layout with dnd-kit), integration flow visualizer (ReactFlow node graphs), and RBAC-gated dashboards with CASL ability-based authorization and Microsoft Entra ID SSO via NextAuth.js
- Built the headless storefront with Next.js 15 App Router, SSR/SSG product catalogue, internationalized routing cart + checkout flow backed by Microsoft Dynamics 365 Commerce Retail Proxy, Redis-persisted cart, and real-time order notifications via GraphQL WebSocket subscriptions (graphql-ws + Apollo Server v4)
- Developed a visual Site Builder enabling non-technical users to configure storefront layout, themes, and content blocks through an admin UI, changes persisted via GraphQL mutations and reflected on the live storefront without a redeploy
- Integrated the E4 GraphQL API (Koa + Apollo Server v4) as the middleware layer between the Next.js frontend and D365 Commerce APIs, implementing TanStack Query v5 hydration boundaries for RSC-to-client state transfer, DataLoader batching to eliminate N+1 query patterns, and Elasticsearch-powered full-text product search
- Worked across a monorepo of 14 services (Lerna + Nx + Turbo) including Strapi 5 CMS, MSSQL (400+ table schema), PostgreSQL, Redis, Kafka (KRaft), and Azure Functions for serverless sitemap generation, with distributed tracing via OpenTelemetry + Jaeger and secrets managed through Azure Key Vault
- Owned frontend testing across Vitest + React Testing Library + MSW (API mocking) + Cypress E2E; enforced code quality with Biome v2, Husky pre-commit hooks, lint-staged, and SonarCloud quality gates on all PRs

Key Technology : React, Next.js 15, TypeScript, Redux/RTK Query, Zustand, TanStack Query, GraphQL, Apollo, REST APIs, WebSockets, NextAuth.js, MUI, Shadcn UI, Tailwind CSS, Zod, react-hook-form, dnd-kit, ReactFlow, Redis, Elasticsearch, Kafka, D365 Commerce, Azure AD/Entra ID, Azure Key Vault, Azure Functions, OpenTelemetry, ethers.js, Web3.js, Docker, Vitest, Jest, Cypress, React Testing Library, Git/GitHub, CI/CD, Sentry, Google Analytics

Projects

Prompts4U - Full-stack SaaS prompt marketplace built with Next.js 15 (App Router) + NestJS 11 + PostgreSQL, where developers browse and purchase production-grade AI prompts for UI components compatible with Claude Code and Cursor. Backend features JWT + OTP auth, Razorpay subscription payments with webhook handling, copy-tracking analytics, and an admin panel for prompt/user management. Engineered PickPixel - an AI pipeline that generates a structured recreation prompt in any stack. Roadmap includes enterprise-grade system prompts (auth flows, Stripe/Razorpay billing, dashboards) and a public API for teams to pull prompts programmatically.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), C++, HTML5, CSS3
Frontend: React, Next.js 15, Redux / RTK Query, Zustand, TanStack Query, React Hook Form, Zod, Tailwind CSS, Shadcn UI, MUI v6, Framer Motion, ReactFlow, dnd-kit, next-intl, NextAuth.js
Backend & APIs: Node.js, NestJS, Express, GraphQL, Apollo Server, REST APIs, WebSockets, Prisma, Knex, PostgreSQL, MSSQL, MongoDB, Redis, Kafka, Elasticsearch
Cloud & DevOps: Azure (AD/Entra ID, Key Vault, Functions, Blob Storage), AWS, Vercel, Docker, CI/CD (GitHub Actions, GitLab), OpenTelemetry, Sentry
Coursework: Data Structures & Algorithms, Computer Networks, Object-Oriented Programming
Testing & Tooling: Vitest, Jest, Cypress, React Testing Library, MSW, Biome, ESLint, Git / GitHub / Bitbucket, Postman, Figma, Nx / Turbo, SonarCloud
